Exercise 1

```
<script>
let age = prompt ("Enter your age ");
let msg;
if (age >= 18){
        msg = "Adult";
}
else {
        msg = "Minor";
}
alert (msg);
</script>
```

Exercise 2

```
<script>
let name = prompt ("Enter your name ");
let cv = prompt ("enter your civility (Mr, Mrs, Miss) ");
let msg;
if (cv == "Mr") {msg = "Sir " + name; }
else if (cv == "Mrs") {msg = "Madam " + name;}
else if (cv == "Miss" ){ msg = "Miss " + name;}
else {msg = "Sir, Madam";}
alert ("Hello "+ msg);
</script>
```

Exercise 3

```
<script>
let note= prompt ("Enter student note ");
let msg;
if (note >= 14) { msg = "Passed with honors "; }
else if (note >= 12) { msg = "Passed with good grade"; }
else if (note >= 10){  msg = "Passed without honors, Passable "; }
else { msg = "Failed "; }
alert (msg);
</script>
```

Exercise 4

```
<script>
let val = prompt ("Enter a number ");
let n = Number(val);
let msg;
if (isNaN(n)) {
        msg = val + " is not a number";
}
```

```
else if (n == parseInt(n)){
        msg = val + " is an integer number";
}
else {
        msg = val + " is a reel number";
}
alert (msg);
</script>
```

Exercise 5

```
<script>
let val = prompt ("Enter a positive number");
let n = Number(val);
let msg;
if (!isNaN(n) && n == parseInt(n)) {
        let c = 0;
        let a = 1;
        while (a <= n){
                if (a % 2 == 0) { c++; }
                a = a + 1;
        }
        msg = "Between 1 and " + n + ", there are " + c + " even numbers";
}
else {
        msg = val + " is not an integer number";
}
alert (msg);
</script>
```

Exercise 6

```
<script>
let sum = 0;
let x, val;
while (sum <=100){
        x = prompt ("Enter a number");
        val = Number(x);
        if (! isNaN(val)) {
                sum = sum + val ;
        }
}
alert ("Sum  = " + sum);
</script>
```
